## 4 Axis Position Control and Comprehensive Programmable Controller

- The CP1H-X with pulse outputs for 4 axes.
- The CP1H-Y with 1-MHz pulse I/O.
- The CP1H-XA with pulse outputs for 4 axes and built-in analog I/O.

## Features

- Pulse output for 4 axes. Advanced power for high-precision positioning control.
- High-speed counters. Differential phases for 4 axes.  
Easily handles multi-axis control with a single unit.
- Eight interrupt inputs are built in. Faster processing of approximately 500 instructions speeds up the entire system.
- Serial communications. Two ports. Select Option Boards for either RS-232C or RS-485 communications.
- Ethernet Communications. Enabled by using an Option Board. Two ports can be used as an Ethernet port to perform. Ethernet communications between the CP1H and a host computer.
- Built-in Analog I/O. XA CPU Units provide 4 input words and 2 output words.
- USB Peripheral Port. Another standard feature.
- The structured text (ST) language. Makes math operations even easier.
- Can be used for the CP1W series and CJ series Unit. The extensibility of it is preeminently good.
- LCD displays and settings. Enabled using Option Board.

Noise immunity		Conforms to IEC 61000-4-4. 2 kV (power supply line)	
Vibration resistance		Conforms to JIS C60068-2-6. 10 to 57 Hz, 0.075-mm amplitude, 57 to 150 Hz, acceleration: 9.8 m/s <sup>2</sup> in X, Y, and Z directions for 80 minutes each. Sweep time: 8 minutes × 10 sweeps = total time of 80 minutes)	
Shock resistance		Conforms to JIS C60068-2-27. 147 m/s <sup>2</sup> three times each in X, Y, and Z directions	
Ambient operating temperature		0 to 55°C	
Ambient humidity		10% to 90% (with no condensation)	
Ambient operating environment		No corrosive gas	
Ambient storage temperature		-20 to 75°C (Excluding battery.)	
Power holding time		10 ms min.	2 ms min.

**Note:** The above values are for a cold start at room temperature for an AC power supply, and for a cold start for a DC power supply.

- A thermistor (with low-temperature current suppression characteristics) is used in the inrush current control circuitry for the AC power supply. The thermistor will not be sufficiently cooled if the ambient temperature is high or if a hot start is performed when the power supply has been OFF for only a short time. In those cases the inrush current values may be higher (as much as two times higher) than those shown above. Always allow for this when selecting fuses and breakers for external circuits.
- A capacitor charge-type delay circuit is used in the inrush current control circuitry for the DC power supply. The capacitor will not be charged if a hot start is performed when the power supply has been OFF for only a short time, so in those cases the inrush current values may be higher (as much as two times higher) than those shown above.

## I/O Bits and I/O Allocations

With CP1H CPU Units, the beginning input and output words (CIO 0 and CIO 100) are allocated by the CPU Unit one or two words at a time. I/O bits are allocated in word units in order of connection to Expansion Units and Expansion I/O Units connected to a CPU Unit.

CPU Unit	Allocated words	
	Inputs	Outputs
CP1H CPU Unit with 40 I/O points	CIO 0 and CIO 1	CIO 100 and CIO 101

**Note:** For details on the number of words allocated to Expansion Units and Expansion I/O Units, refer to *Words Allocated to CP1W Expansion Units and Expansion I/O Units* on page 23.

### ● Example: I/O Bit Allocations When Expansion Units Are Connected

## Expansion Unit and Expansion I/O Units Specifications

### Maximum Number of CP1W/CPM1A Expansion Unit and Expansion I/O Units

#### CP1H CPU Unit

### Restrictions on the Number of CP1H Expansion Unit and I/O Unit Connections

Up to seven Expansion Units and Expansion I/O Units can be connected when a CP1H CPU Unit is used, but the following restrictions apply. Observe these restrictions when using the models in the shaded areas in the following tables. A maximum total of 15 input words is allocated for Expansion Units and a maximum total of 15 output words is allocated for Expansion Units and Expansion I/O Units.

#### Words Allocated to CP1W Expansion Units and Expansion I/O Units

	4 platinum resistance thermometer inputs	CP1W-TS102	4	---
CompoBus/S I/O Link Unit	8 inputs and 8 outputs	CP1W-SRT21	1	1

For example, the CP1W-TS002 Temperature Sensor Unit is allocated four words per Unit, so no more than three Units can be connected (4 words x 3 Units = 12 words). It would then be possible to mount a combination of other Units to use the remaining three input and 15 output words.

#### Examples of Possible Combinations

Number of Units	Input	Output
CP1H-X40DR-A		
CP1W-TS002 x 3	4 words x 3 Units = 12 words	0 words
CP1W -TS001 x 1	2 words x 1 Unit = 2 words	0 words

## ■ Using CP1W-CN811 I/O Connecting Cable

- I/O Connecting Cable can be connected to any Unit from the CP1H CPU Unit to the third Expansion Unit or Expansion I/O Unit (i.e., the fourth Unit).
- Only one I/O Connecting Cable can be used in each CP1H PLC.
- Even when I/O Connecting Cable is used, the above restrictions on the number of connectable CP1W/CPM1A Expansion Units and Expansion I/O Units still apply.

## ■ Using CJ-series Special I/O Units or CPU Bus Units with a CP1H CPU Unit

Up to two CJ-series Special I/O Units or CPU Bus Units can be connected by using a CP1W-EXT01 CJ Unit Adapter. The number of Units that can be used is as described below.

Use CP1W-CN811 I/O Connecting Cable when using CP1W Expansion Units and Expansion I/O Units at the same time as a CJ Unit Adapter. In this situation, the number of CP1W Expansion Unit and Expansion I/O Units that can be connected is subject to the restrictions described above. Only one I/O Connecting Cable can be used.

## Current Consumption

- Based on the current consumption when CJ-series Special I/O Units or CPU Bus Units are used with a CP1H CPU Unit, the maximum number of Units that can be used is two CJ-series Units and seven CP1W Expansion Units and Expansion I/O Units.

The current consumption for the CP1H must be no more than 2 A for 5 V and 1 A for 24 V, and the total current consumption must be no more than 30 W.

Check the total current consumption to be sure these limits are not exceeded referring to page 25 for the CP1H CPU Unit and CP1W Expansion Unit and Expansion I/O Unit current consumptions and to the above table for CJ-series Unit current consumptions.
